Cyber Risk – Global

Cyber disclosures reveal varying levels of transparency across high-risk sectors

- » **Corporate cyber risk disclosures provide contrasting levels of transparency.** Corporate disclosures regarding cyber risk vary greatly across the sectors we identify as having elevated cybersecurity risk. As cyberattacks increase in frequency, a lack of transparency about cybersecurity strategies could erode investor confidence and affect credit quality.
- » **Banks, telecommunications & media companies provide the most detailed disclosures among the sectors analyzed.** They go beyond citing cyber risk and their board oversight practices, and discuss in fairly specific terms their cybersecurity risk management strategies.
- » **Hospitals and other healthcare providers have the least complete disclosures among the four sectors most at risk of a cyberattack.** Although all 10 of the companies we examined in this sector highlight cyber risk as a growing threat in their disclosures, fewer than half detail how their board oversees cyber risk, while only a handful discuss their strategy for managing the risk.
- » **Market infrastructure providers, securities firms and electric utilities provide above-average disclosures.** Nearly all the companies in these sectors list cybersecurity as a risk and discuss some level of governance on the issue. Most of these companies also list cyber insurance as a mitigant to the financial exposure associated with cyber risk.
- » **Sectors with the most limited disclosures include retail, lodging, health insurance, medical devices and transportation services.** In these sectors, the companies' risk discussions do not consistently cite cybersecurity. Also, they have less-robust disclosures around the governance structure of this risk, and few of them provide details about cyber risk mitigation.
- » **US and European companies are more transparent than their Asian peers.** While nearly all companies mention cybersecurity risk, US-based companies appear more reliant on cyber insurance as a means to manage the risk, while their European counterparts are more likely to offer a detailed discussion about their strategy to mitigate the operational impact of a cyberattack.
- » **Investment-grade companies provide more detail about their cybersecurity measures.** Investment-grade companies typically have greater financial resources to draw on and are more likely to have the internal staffing and infrastructure to generate cybersecurity disclosures.

Corporate cyber risk disclosures provide contrasting levels of detail and transparency

The level of detail that companies share about how they oversee and manage cybersecurity risk varies greatly by sector and region, according to our review of 2018 annual financial statements and 2019 proxy statements (or equivalent) of companies operating in sectors with elevated cybersecurity risk. Our analysis is based on public disclosures from 125 companies in North America, EMEA and Asia. These companies comprise the largest rated debt issuers in each of the sectors [we have identified](#) as having high or medium-high cybersecurity risk. (See appendices for our definitions of cyber risk levels, a breakdown of cyber risk exposure by sector, and a list of the companies whose disclosures we analyzed.)

Cyber disclosures deemed most relevant to our analysis fall into three broad categories: risk factor discussion, board-level oversight, and risk management. Elements of disclosure that we specifically looked for within those categories are defined in Exhibit 1. An average disclosure in our sample group contains some discussion of the elements in the first two categories, meaning that it addresses the cybersecurity risk facing the enterprise and describes the board governance structure assigned to oversee the risk. Below-average disclosure fails consistently to address even the first two categories, while stronger disclosures go further and detail a company's approach to managing this risk.

Exhibit 1

What we consider when judging the breadth of cybersecurity disclosures Three cybersecurity disclosure categories broken down by subcategory

Categories	Subcategories	Why it matters?
1. Risk Discussion	1. Operational, reputational, regulatory, and financial risks specific to the company such as: data security, critical physical infrastructure, third-party cyber risk, exposure to data privacy laws.	Recognizing the rapid pace of digitization across industries and the growing number of cyber attacks being reported, calling out cyber risk as an operational, reputational, and financial risk should be common practice by now. But merely referencing it as a risk is insufficient. The stronger disclosures acknowledge cyber as an enterprise-wide issue and describe the relevant nuances cyber risk poses to the company.
2. Risk Oversight	1. Board committee responsible for cyber risk oversight 2. Board members with cyber experience and/or training 3. Chief information security officer (CISO) or equivalent, reporting frequency to Board	Information about a company's cyber risk oversight will offer insight into its attention to this risk and the internal expertise it has to call upon to help manage this risk.
3. Risk Management	1. Access to cyber insurance 2. Board approved global cybersecurity strategy 3. Risk management strategy including: embedded security personnel across business lines, reporting structure between CISO or equivalent and executive team, presence of 24/7 global emergency response team, etc.	Participants in each sector has experienced a cyber attack and companies recognize that they cannot guarantee they will not be attacked in the future. Cyber risk management is therefore critical since it mitigates the risk by seeking to minimize the number of attacks and improve the recovery prospects from an attack.

Source: Moody's Investors Service

The level of transparency of a company's cybersecurity disclosures does not necessarily reflect the degree to which the company is prepared to deal with such threats. Some companies choose to withhold information about their cyber defense strategies for security reasons. Others may fear that being cited as a cybersecurity leader would only encourage attacks. Still, sharing details about, say, board-level oversight procedures can demonstrate a basic level of maturity in how a company manages its exposure to cyber threats without providing the type of information that is likely to draw the attention of attackers.

From a credit perspective, disclosure is less important than actual defense in depth measures and an impactful mitigation strategy. That said, cybersecurity public disclosures are a useful tool to compare and contrast how companies in sectors with elevated risk are addressing these challenges.

For example, confidence sensitive sectors, such as financial institutions, rely on investors and thus provide detailed disclosures of cyber risk mitigation and oversight. The absence of more detailed disclosures can make it difficult to assess a company's preparedness to

manage cyber risk. As successful cyberattacks increase in frequency, a lack of transparency could ultimately erode investor confidence and complicate efforts by companies to raise capital and access liquidity.

Regulators are paying close attention to the issue, as was evident in the US Securities and Exchange Commission's (SEC) February 2018 [Commission Statement and Guidance on Public Company Cybersecurity Disclosures](#), which sought to promote the timely and accurate disclosure of cybersecurity risks and incidents. The SEC recommended that companies address cyber risk in similar levels of detail as they do economic and business risk, particularly as it relates to internal controls, financial reporting and timely public disclosures.

The commission's guidance seeks to move cyber disclosures in a more prescriptive direction that will, over time, generate more consistent and reliable information. The SEC's previous cyber guidance relied heavily on the subjective judgment of corporate counsel to determine what to disclose. As a result, information on cyber events was inconsistent. The SEC's Investor Advisory Committee observed in its December 2017 [Discussion Draft Re: Cybersecurity and Risk Disclosure](#) that public company disclosures regarding cybersecurity incidents had not meaningfully improved since 2011. Furthermore, an SEC review of 2017 breach data found that only four of the 82 cybersecurity incidents at public companies in 2017 were followed by the filing of an 8-K disclosing the breach to investors.

Banks, telecommunications and media provide the most detailed disclosures

Banks and telecommunications & media companies disclose the most information about their cybersecurity measures among the sectors that we have identified as having significant exposure to cyber risk. Companies in these sectors consistently go beyond the baseline disclosure that recognizes cybersecurity as a growing enterprise risk and describes their oversight of cybersecurity risk. About half of the companies offer a detailed account of their risk management strategy and mention the company's adoption of a board-approved global cybersecurity strategy. Cybersecurity disclosures in the banking and telecom & media sectors also appear to meet the disclosure controls and procedures recommendations in the SEC's 2018 cybersecurity guidance.

Exhibit 2

Banks and telecom & media companies provide the most information

Number of companies in sectors with high/medium-high cyber risk that provide disclosure in each subcategory

Sector	Total # of Issuers	Cyber Risk	Risk Discussion			Risk Oversight			Risk Management			# of Above Average Subcategories
			Management Discussion & Analysis	Board Committee	Director Qualifications	CISO interaction with Board	Cyber Insurance	Detailed Risk Mitigation Strategy	Global Cyber Strategy			
Banks	10	High	10	7	5	5	3	5	5	7		
Telecommunications & Media	10	Med-High	10	4	3	3	5	5	2	6		
Securities Firms and Market Infrastructure Providers	18	High	17	9	7	2	8	9	4	5

Retail	10	Med-High	7	7	3	2	1	0	0	3		
Technology	10	Med-High	8	6	3	2	1	2	0	3		
Health Insurance	7	Med-High	7	6	2	0	0	0	0	2		
Medical Devices	10	Med-High	9	5	1	2	1	1	1	2		
Hospitals and Healthcare Providers	10	High	10	4	1	0	2	1	1	1		
Manufacturing & Auto	10	Med-High	7	3	2	0	1	3	0	1		
Transportation Services	10	Med-High	8	6	2	0	1	2	1	1		

Blue shading indicates tallies that exceed the average for the subcategory across all analyzed sectors.

Sources: *Company public disclosures and Moody's Investors Service*

The banking sector is one of four sectors we have classified as being most at risk of experiencing a material cyberattack. Banks with the most transparent and complete cybersecurity disclosures include [JPMorgan Chase & Co.](#) (A2 stable), [BNP Paribas](#) (Aa3 stable), [Société Générale](#) (A1 stable), and [Citigroup Inc.](#) (A3 stable). In addition to the baseline disclosure about cyber risk and oversight that we were looking for, they offer substantial details about their respective risk management strategy. Their disclosures include details about the structure and reporting lines of their cybersecurity team; address the partnership between the cybersecurity team and the company's lines of business, including the presence of embedded cybersecurity personnel at the line of business level; and mention the existence of a 24/7, global cyber emergency response team. Some, like [Société Générale](#) (A1 stable), even disclose how much capital they invest in their cybersecurity initiatives.

Telecom & media companies are at a medium-high risk of experiencing a material cyberattack according to [our cyber risk heat map](#). Like banks, their cybersecurity disclosures stand out for their level of transparency and detail, especially those of [Verizon Communications Inc.](#) (Baa1 positive), [Vodafone Group PLC](#) (Baa2 negative) and [Sprint Corporation](#) (B2 review for upgrade). However, the two sectors differ somewhat in terms of the number of companies that refer to access to cyber insurance and adoption of a board-approved global risk strategy. Banks highlight the latter more frequently, which could point to a more sophisticated appreciation of cyber risk and a deliberate, proactive approach to managing it. Telecom & media companies appear to be heavier adopters of cyber insurance, which provides a way to transfer financial risk to a third party. But the amount, type or scope of coverage are typically not disclosed.

Cyber insurance coverage program limits of \$25 million to \$100 million are now common, with some companies able to purchase as much as \$750 million in coverage (see "[P&C Insurance — Global: Battling hidden cyber exposures, insurers position for growing opportunity](#)"). However the cost of recovering from an attack can reach into the hundreds of millions dollars, as [FedEx Corporation](#) (Baa2 stable) demonstrated when it reported \$400 million in costs associated with the NotPetya cyberattack during fiscal 2018. Furthermore, coverage of fines and regulatory penalties resulting from a cyberattack is unclear. In most jurisdictions, insurers are legally prohibited from indemnifying fines and regulatory penalties because doing so may undermine the intention of the law. As fines grow, sometimes even exceeding \$100 million, the financial impact can be significant.

Hospitals and other healthcare providers have the least detailed disclosures among the sectors most at risk of a cyberattack

Hospitals and other healthcare providers are less transparent about their cyber risk oversight and management strategies than other high-risk sectors. Despite consistently acknowledging that cyber threats pose a material risk to their operations, reputation and financial strength, fewer than half provide details about their cybersecurity board oversight structure and only one, [Encompass Health Corp.](#) (Ba3 stable), gives any information about the cyber qualifications of its board members. In addition, only two mention access to cyber insurance and one, [Fresenius SE & Co. KGaA](#) (Baa3 stable), provides a more in-depth discussion of its cybersecurity risk management strategy.

We think the absence of more detailed disclosures makes it difficult for investors to assess a company's level of preparedness, or engage with company management on their future plans.

Securities firms & market infrastructure providers and electric utilities provide above-average disclosures

Nearly all securities firms, market infrastructure providers and electric utilities in our sample group list cybersecurity as a risk and display some level of oversight over the issue. They detail their company's governance structure, including the board committee in charge of cybersecurity oversight, along with biographies of the board members with cybersecurity expertise. Some, like [Nasdaq Inc.](#) (Baa2 stable) and [London Stock Exchange Group plc](#) (A3 review for downgrade) even reference a board approved multi-year cybersecurity strategic plan. From a risk management standpoint, about half of these companies list cyber insurance as a partial mitigant to cybersecurity risk and the same percentage of companies offers details about their internal risk management practices.

That said, there are regional differences in the level of disclosure in this group. All three sectors include a number of Asian companies that are generally less transparent in their cyber disclosures and often fail to even address cybersecurity in their risk discussion. Excluding Asian companies, the strength of cybersecurity disclosures at market infrastructure providers & securities firms would be more in-line with that of the banking sector.

There is a further regional distinction between US and European electric utilities. Large European electric integrated utilities like [Iberdrola S.A](#) (Baa1 stable), [Enel S.p.A.](#) (Baa2 positive) and [Electricité de France](#) (A3 stable) provide extensive details about their cyber risk management strategy. By contrast, US utilities in the sector provide more boilerplate disclosures acknowledging cybersecurity risk, their board oversight structure and their access to cyber insurance, with none mentioning the existence of a board-approved global cyber strategy.

Other sectors with medium-high risk provide the most limited disclosures

Lodging, gaming and cruise, health insurance, manufacturing and autos, medical devices retail, technology and transportation services all face medium-high cyber risk, but their cybersecurity disclosures are the most limited in our sample group of companies. Companies

in these sectors did not consistently cite cybersecurity in the risk discussions sections of their financial reports, and disclosures addressing the oversight of this risk are significantly less robust. Furthermore, most disclosures are limited to boilerplate language without addressing the risk nuances relevant to their respective businesses. Moreover, few address risk management in any meaningful way and, apart from lodging, gaming and cruise, only a limited number reference access to cyber insurance.

The lack of detailed disclosures in these sectors is surprising given that retailer [Target Corporation](#) (A2 stable), lodging company [Marriott International Inc.](#) (Baa2 stable), and transportation services company FedEx all fell victim to highly publicized, large-scale cybersecurity attacks.

Exhibit 3

Limited disclosures in lodging, transportation services and retail despite high-profile attacks

Large-scale cyberattacks on Marriott, FedEx and Target

Issuer	Date	Description
Marriott international Inc.	Nov-18	Breach of Starwood guest reservation database, affecting up to 383 million guest records. Breached data included names, addresses, credit card numbers, phone numbers, passport numbers, travel locations and arrival and departure dates.
FedEx Corporation	Jun-17	The worldwide operations of its TNT Express subsidiary were significantly affected by a cyberattack. The attack did not affect the systems and data of any other FedEx companies.
Target Corporation	Dec-13	Data breach that exposed the names, mailing, address, phone numbers and email addresses for up to 70 million individuals.

Source: Company information

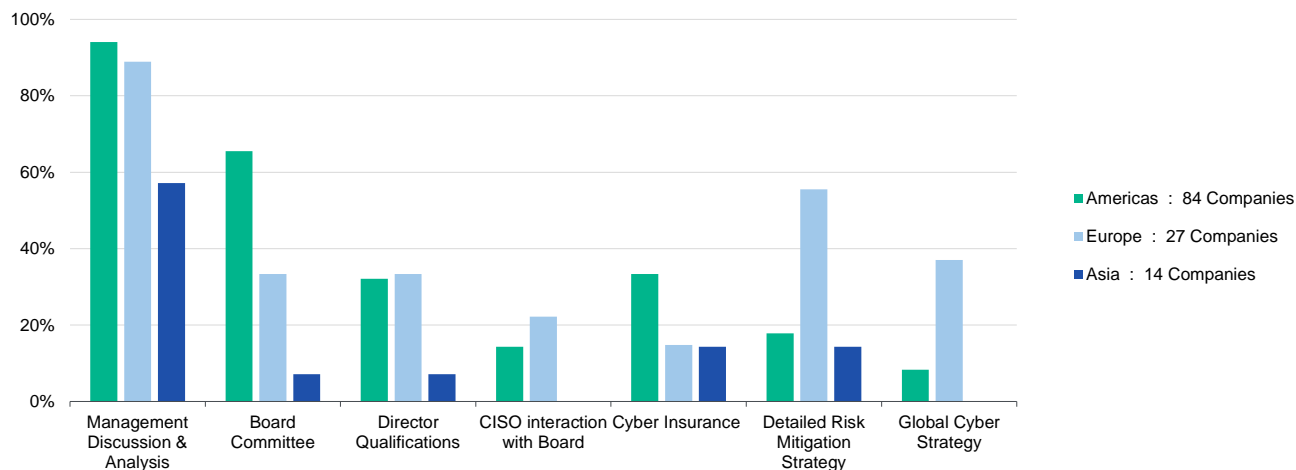

US and European companies are more transparent than their Asian peers

Companies headquartered in the US and Europe tend to have more complete disclosures than those based in the Asia Pacific region. Less than 60% of the Asian companies in our sample group cite cybersecurity in the risk section of their financial disclosures, while 90% of US and European companies mention it (see Exhibit 4). APAC jurisdictions typically have fewer regulatory disclosure requirements regarding corporate governance and board oversight, which may be a reason for the more limited cyber discussion from companies in the region.

Exhibit 4

Disclosures tend to be weaker among Asian companies

Percentage of companies by region that provide key components of cybersecurity disclosure

Sources: Company filings and Moody's Investors Service

However, despite their similar level of attention to citing cybersecurity risk, there is a difference in how companies in the two regions discuss how they manage this risk. US companies appear more reliant on cyber insurance as a mitigant, while their European counterparts are more likely to offer a detailed discussion about their internal infrastructure to manage cyber risk.

This difference in disclosure approach may be a reflection of differing regulatory and cultural regimes in the US and Europe. US companies focus heavily on minimizing the financial impact of potential cyber events, which is emblematic of the shareholder primacy model of most US companies. Shareholder lawsuits against US companies in the wake of cyber breaches and other material events are common and may encourage companies to disclose safeguards to protect investors from potential cyber costs. Additionally, some US companies fear that disclosures detailing preemptive mitigation programs that subsequently fail to prevent cyberattack will expose them to disclosure-focused shareholder objection suits that are commonplace in mergers and acquisition transactions. In Europe, where shareholder litigation is less common, companies may choose to provide greater transparency on steps in place to mitigate the actual occurrence of cyber events.

Investment-grade companies provide more detail than do others

The quality and transparency of cyber disclosures are typically more robust for more highly rated companies. About 40% of the investment-grade companies in our sample group provide some discussion about cyber risk management. They are also be more forthcoming in their discussion about board oversight and reporting structure than speculative-grade companies. This is not surprising given that investment-grade companies typically have greater financial resources to draw on and are more likely to have the internal staffing and infrastructure to generate cybersecurity disclosures.

Exhibit 5

Cyber disclosures of investment-grade companies are more transparent than those of their speculative-grade counterparts Percentage of companies by rating category that provide key components of cybersecurity disclosure

This graph uses senior unsecured ratings for investment-grade companies and corporate family ratings for speculative-grade companies.

Sources: Company filings and Moody's Investors Service

Similarly, larger debt issuers typically provide greater transparency in their cybersecurity disclosures. This, too, is not surprising because the largest debt issuers are typically very sizable companies with significant resources and greater financial flexibility.

Exhibit 6

Cyber disclosures for large debt issuers are more transparent than disclosures cited by smaller counterparts

Appendix A

Exhibit 7

How we define levels of cyber risk

Cyber risk assessment levels

LEVELS

These sectors have a significant reliance on technology and confidential information for their operations and are highly interconnected, both internally and externally. As a result, they will often have a limited ability to fall back on manual operations, either because of the nature of their business or because they are unable to do so efficiently while remaining competitive. These sectors also often represent critical global infrastructures that are both data rich and where even short-term disruption would have a cascading and far-reaching impact on other sectors (for example, banks and hospitals).

These sectors have multiple vulnerabilities that make them cyberattack targets. They rely heavily on technology to operate, although they have some ability to reduce the operational impact of an attack through established manual processes. However, a significant data breach or prolonged disruption of operations would result in meaningful impact that reputational effects could further amplify.

Digitization heightens the cyber risk exposure of these sectors, but fewer external interconnections and localized operations (for example, factories) compared with higher-risk sectors somewhat offset the risk. In the event of a successful attack, these characteristics could limit the extent to which the attack spreads throughout operations. As issuers in these sectors further increase their digitization, their cyber risk profiles could increase in the next few years.

The rate of digitization in these sectors is generally lower compared with higher-risk sectors. Where data is necessary for business processes, medium-low risk sectors are generally able to function with manual workarounds and may benefit from some regulatory protections.

These sectors have a relatively low reliance on technology and on data to maintain business operations, and they often have well-established manual workarounds. Many low-risk sectors also benefit from strong regulatory protections that allow them to operate with a monopoly-like market position or they can offset losses through pricing adjustments (for example, through tax revenue). These sectors have little or no emerging trends that will alter their cyber risk profiles in the next few years.

Taken from our February 2019 report, "[Cross-Sector – Global: Credit implications of cyber risk will hinge on business disruptions, reputational effects.](#)"

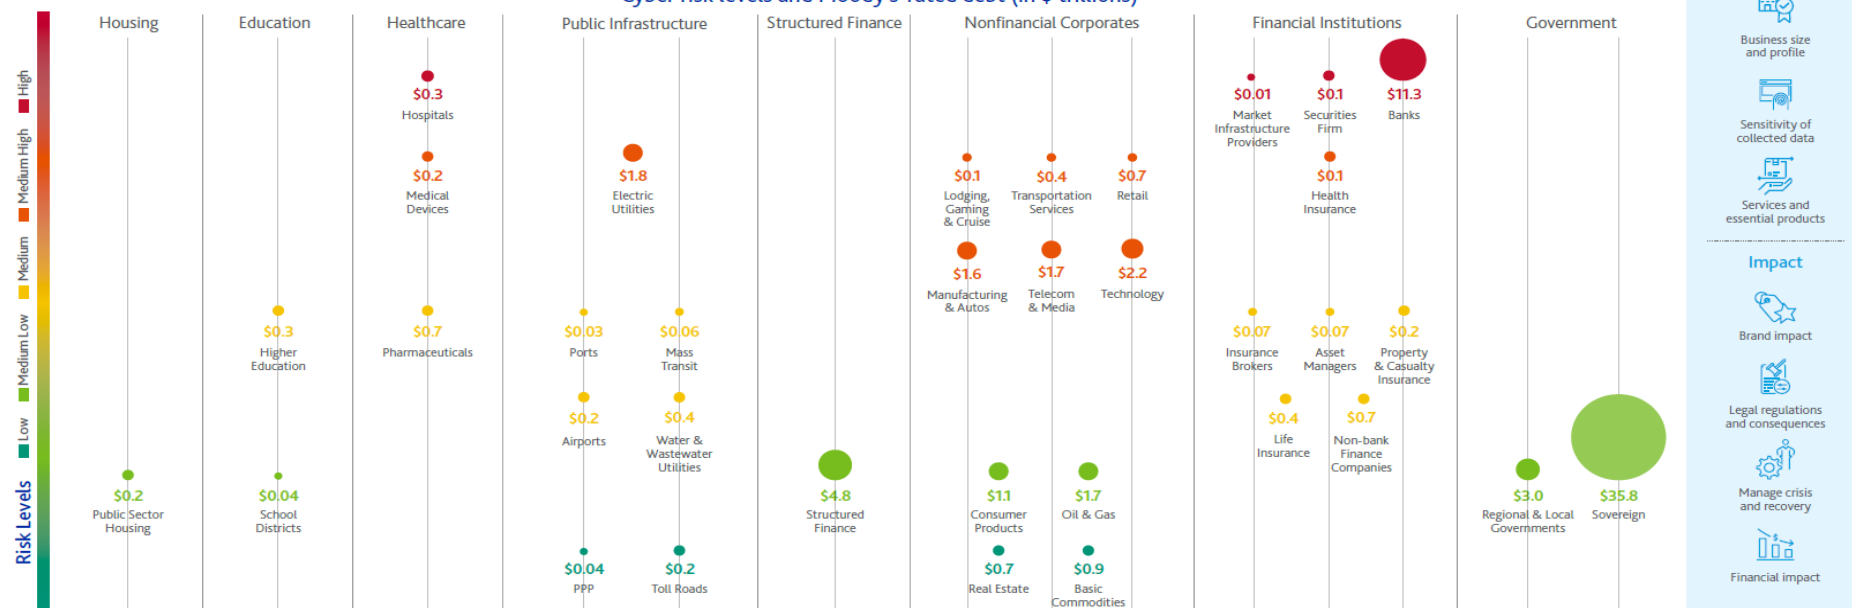

Source: Moody's Investors Service

Appendix B

Cyber Risk: Credit Risk Exposure by Sector

The growing intersection of supply chains, connectivity and access to data is increasing the potential for significant cyberattacks, creating new risks for governments and businesses worldwide. Moody's assessed the inherent cyber risk exposure of 35 broad sectors based on two factors: vulnerability to a cyber event or attack, and impact in terms of potential disruption of critical business processes, data disclosure and reputational effects.

CREDIT RATINGS ISSUED BY MOODY'S INVESTORS SERVICE, INC. AND ITS RATINGS AFFILIATES ("MIS") ARE MOODY'S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES, AND MOODY'S PUBLICATIONS MAY INCLUDE MOODY'S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES. MOODY'S DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT OR IMPAIRMENT. SEE MOODY'S RATING SYMBOLS AND DEFINITIONS PUBLICATION FOR INFORMATION ON THE TYPES OF CONTRACTUAL FINANCIAL OBLIGATIONS ADDRESSED BY MOODY'S RATINGS. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS AND MOODY'S OPINIONS INCLUDED IN MOODY'S PUBLICATIONS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. MOODY'S PUBLICATIONS MAY ALSO INCLUDE QUANTITATIVE MODEL-BASED ESTIMATES OF CREDIT RISK AND RELATED OPINIONS OR COMMENTARY PUBLISHED BY MOODY'S ANALYTICS, INC. CREDIT RATINGS AND MOODY'S PUBLICATIONS DO NOT CONSTITUTE OR PROVIDE INVESTMENT OR FINANCIAL ADVICE, AND CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT AND DO NOT PROVIDE RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. NEITHER CREDIT RATINGS NOR MOODY'S PUBLICATIONS COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MOODY'S ISSUES ITS CREDIT RATINGS AND PUBLISHES MOODY'S PUBLICATIONS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL, WITH DUE CARE, MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

MOODY'S CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY RETAIL INVESTORS AND IT WOULD BE RECKLESS AND INAPPROPRIATE FOR RETAIL INVESTORS TO USE MOODY'S CREDIT RATINGS OR MOODY'S PUBLICATIONS WHEN MAKING AN INVESTMENT DECISION. IF IN DOUBT YOU SHOULD CONTACT YOUR FINANCIAL OR OTHER PROFESSIONAL ADVISER. ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY LAW, INCLUDING BUT NOT LIMITED TO, COPYRIGHT LAW, AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT MOODY'S PRIOR WRITTEN CONSENT.

CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY ANY PERSON AS A BENCHMARK AS THAT TERM IS DEFINED FOR REGULATORY PURPOSES AND MUST NOT BE USED IN ANY WAY THAT COULD RESULT IN THEM BEING CONSIDERED A BENCHMARK.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY CREDIT RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$2,700,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for ratings opinions and services rendered by it fees ranging from JPY125,000 to approximately JPY250,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody.com for the most updated credit rating action information and rating history.
